

M3

Influenced by BMW race cars campaigned in Europe, Racing Dynamics aerodynamic components and road wheels for the BMW M3 unmask the race bred character of this compromised street car. Our DTM front lip spoiler maximizes aerodynamic penetration. The displaced air is then reunited in the wake of the low mounted rear diffuser and Class II racing inspired trunk wing. Your connection to the road is complete through the latest evolution of the Racing Dynamics road wheel—the RGS.

The Racing Dynamics line of performance accessories for M3 models also includes spring kits, sway bar kits, strut braces, computer chips, exhaust systems, and interior additions. Providing innovative technical and stylistic alternatives to enhance your driving experience is the source of our greatest satisfaction.
